

Lead discovery and development of production process for sarcopenia treatment NB-101 with NOTCH1 inhibitory mechanism

METABOLIC	Lead
Product Type	Recombinant protein
Indication	Sarcopenia
Target	NOTCH1 receptor
MoA(Mechanism of Action)	Inhibition of NOTCH1 signal for muscle satellite cell activation
Competitiveness	<ul style="list-style-type: none"> - So far there is no drug directly increase muscle mass. - NB-101 recombinant protein suggest a novel mechanism for muscle satellite cell activation.
Development Stage	Lead
Route of Administration	IV or IM injection
