

Construction of a new paradigm for gallstone treatment

GASTROINTESTINAL	Candidate
Product Type	Small molecule
Indication	Cholelithiasis, Gallbladder polyp
Target	Gallstone, Gallstone polyp
MoA(Mechanism of Action)	<ul style="list-style-type: none"> • Bulky heterocyclic ring • Chelation effect • Hydrophobic and Hydrophilic
Competitiveness	• low evaporation, low toxicity, high solubility
Development Stage	Candidate
Route of Administration	The solvent was infused into the gallbladder.
