

# Development of EFL-1101, a topical anticholinergic agent, for the Treatment of Hyperhidrosis

eFlask co., Ltd.

OTHERS	Preclinical
Product Type	NCE small molecule
Indication	Hyperhidrosis
Target	Acetylcholine receptor
MoA(Mechanism of Action)	Muscarinic receptor antagonist
Competitiveness	EFL-1101 has proved to be superior as a best-in-class to competing drugs due to its improved efficacy and relief of topical and systemic toxicity in preclinical studies. In addition, it is expected to show a prolonged duration of action, maintaining a high concentration of the drug at the site of action.
Development Stage	Preclinical
Route of Administration	Topical application
