

Development of antibody against specific target expressed in the tumor microenvironment

Seoul National University

ONCOLOGY	Lead
Product Type	Monoclonal antibody for antibody-drug conjugate (ADC)
Indication	Solid cancer
Target	A molecule that specifically expressed within tumor microenvironment in response to hypoxia
MoA(Mechanism of Action)	Binds to the target enriched in hypoxic tumor microenvironment and efficiently internalized into the cancer cell.
Competitiveness	<ul style="list-style-type: none"> • First in class • Extremely high tumor-to-normal tissue ratio in bio-distribution
Development Stage	Lead
Route of Administration	Intravenous injection
