

# Development of Therapeutics for Liver Fibrosis through the Discovery of Collagen Inhibitors

Daewoong Pharmaceutical

| METABOLIC                | Candidate  |
|--------------------------|--|
| Product Type             | Small molecule   |
| Indication               | Liver fibrosis   |
| Target                   | Serpin Family  |
| MoA(Mechanism of Action) | Inhibition of Extracellular Matrix Production  |
| Competitiveness          | First-in-Class<br>Collagen inhibitor<br>A small molecule compound that inhibits downstream signals of fibrotic diseases, making it suitable for use as a drug for various fibrotic conditions. |
| Development Stage        | Candidate  |
| Route of Administration  | Oral   |
