

Recurring and metastatic colorectal cancer New drug-targeted biomarker Protein-Protein Interactions (PPIs) Development of a New Lead

Chosun University School of Medicine

ONCOLOGY	Hit
Product Type	Small molecule inhibitor
Indication	Colorectal Cancer
Target	Recurring and metastatic colorectal solid tumor
MoA(Mechanism of Action)	Protein-protein interaction (PPI) inhibition between the colorectal cancer metastasis-specific proteins
Competitiveness	<ul style="list-style-type: none">- First-in-class- PPI inhibitor on the novel targets that are responsible for the metastatic event in the target disease
Development Stage	Hit
Route of Administration	Oral administration or intravenous injection
