

Discovery of Next-Generation Menin Inhibitor/Degrader Lead Compounds to Overcome Acquired Resistance Mutations

ONCOLOGY	Lead
Product Type	Small molecules
Indication	AML
Target	Menin
MoA(Mechanism of Action)	Small-molecule Menin degrader that promotes degradation of Menin and disrupts Menin-KMT2A-driven leukemogenic transcription in AML.
Competitiveness	Novel Menin degrader representing a rare targeted protein degradation approach for Menin, with the potential to overcome limitations of current Menin inhibitors by eliminating the target protein and enabling more durable suppression of Menin-driven leukemogenic transcription.
Development Stage	Lead
Route of Administration	Oral administration
